Information

§ The structure was designed as a reinforced concrete semi-prefabricated slab supported on four rows of reinforced concrete piles of octagonal cross section 60x60 m, 1,700 pcs., 34,000 m, containing 51,700 m³ of concrete.

§ The building was performed in two phases: manufacture of piles and other prefabricated elements in Serbia, shipping to the site, pile driving and assembly of the elements.

§ The output of "Generalexport" and "Ratko Mitrovic" included:

- open and covered storages;
- new reloading capacities including cranes and rail paths;
- office building;

- port infrastructure, automatic telephone exchange;
- refrigerator room, capacity 3,000 tons yearly;
- sports hall, hospital and a 650-flat house block.
